Queue Data Structure

Linear Data Structure

Best example, Queue at a bank, movie theatre or food chain

FIFO / LILO → First in first out

First one to come in will be the first one to go out.

Real life example

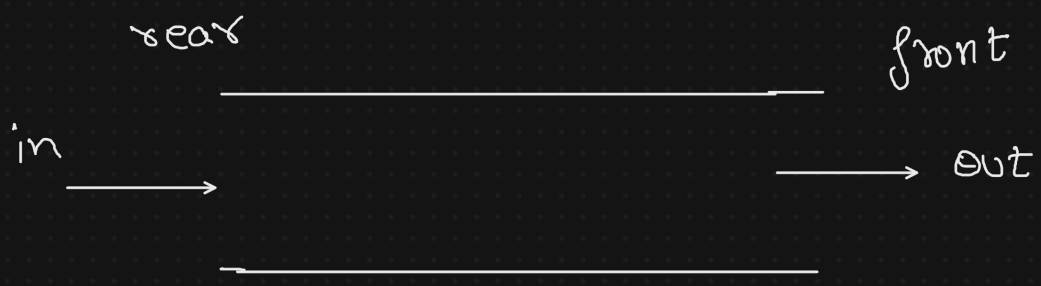

→ Line at Bank
→ Toll Booth
→ Printer Jobs
→ Customer Support
→ Task Scheduling
→ Elevator Request

Industry | Real Tech

→ Job Scheduling
→ Network Traffic
→ Messaging Service → SQS, RabbitMQ, Kafka

Queue is also a abstract data type

Can be implemented using List or Linked list

1. enqueue
2. dequeue
3. Size
4. empty
5. Peek / front

Queue using list

talk about how each function will be performed with complexity.

Queue using Linked List

Talk about the stack approach of only head and then why tail is needed.
